AUDIT CERTIFICATION

Mr. Shawn Andrews
Lenovo
7001 Development Drive
Morrisville, NC 27560

May 15, 2018

I verified the SPC Benchmark 1™ (SPC-1™ V3.6) test execution and performance results of the following Tested Storage Product:

**Lenovo ThinkSystem DS6200**

The results were:

<table>
<thead>
<tr>
<th>SPC-1 IOPS™</th>
<th>180,006</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPC-1 Price-Performance™</td>
<td>$93.29/SPC-1 KIOPS™</td>
</tr>
<tr>
<td>SPC-1 IOPS™ Response Time</td>
<td>0.518 ms</td>
</tr>
<tr>
<td>SPC-1 Overall Response Time</td>
<td>0.344 ms</td>
</tr>
<tr>
<td>SPC-1 ASU Capacity</td>
<td>2,267 GB</td>
</tr>
<tr>
<td>SPC-1 ASU Price</td>
<td>$7.41/GB</td>
</tr>
<tr>
<td>SPC-1 Total System Price</td>
<td>$16,791.99</td>
</tr>
</tbody>
</table>

In my opinion, these performance results were produced in compliance with the SPC requirements for the benchmark.

The testing was executed using the SPC-1 Toolkit Version v3.0.2-1-g823a. The audit process was conducted in accordance with the SPC Policies and met the requirements for the benchmark.

A Letter of Good Faith was issued by the Test Sponsor, stating the accuracy and completeness of the documentation and testing data provided in support of the audit of this result.

A Full Disclosure Report for this result was prepared by InfoSizing, reviewed and approved by the Test Sponsor, and can be found at [www.spcresults.org](http://www.spcresults.org) under the Submission Identifier A32006.

The independent audit process conducted by InfoSizing included the verifications of the following items:
• The physical capacity of the data repository;
• The total capacity of the Application Storage Unit (ASU);
• The accuracy of the Benchmark Configuration diagram;
• The tuning parameters used to configure the Benchmark Configuration;
• The Workload Generator commands used to execute the testing;
• The validity and integrity of the test result files;
• The compliance of the results from each performance test;
• The compliance of the results from each persistence test;
• The compliance of the submitted pricing model; and
• The differences between the tested and the priced configuration, if any.

The Full Disclosure Report for this result was prepared in accordance with the disclosure requirements set forth in the specification for the benchmark.

The following benchmark requirements, if any, were waived in accordance with the SPC Policies:

None.

Respectfully Yours,

Doug Johnson, Certified SPC Auditor
LETTER OF GOOD FAITH

May 15, 2018

From: Mike Fitzgerald
VP, Data Center Product Group Operations
Lenovo

Subject: SPC-1 Letter of Good Faith for Lenovo Think Systems DS6200

Lenovo is the SPC-1 Test Sponsor for the above-listed product. To the best of our knowledge and belief, the required SPC-1 benchmark results and materials we have submitted for the product are complete, accurate, and in full compliance with the 3.6 of the SPC-1 benchmark specification.

In addition, we have reported any items in the Benchmark Configuration and execution of the benchmark that affected the reporting results even if the items are not explicitly required to be disclosed by the SPC-1 benchmark specification.

Sincerely,

Mike Fitzgerald
VP, Data Center Product Group Operations
Lenovo

SPC-1 V3.6

SUBMISSION IDENTIFIER: A32006

SUBMITTED FOR REVIEW: MAY 17, 2018
**Benchmark Configuration Diagram**

The Lenovo ThinkSystem DS6200 SAN array is performance optimized for deployment in the datacenter to run your mission critical workloads. Offering 50% greater performance than the DS4200, the DS6200 is powered by a Rapid Data Placement Engine and provides industry-leading price/performance and scalability, along with high availability.

With extreme flexibility and impressive performance and capacity, the DS6200 helps you tame the storage monster. Using 3.5-inch (LFF) or 2.5-inch (SFF) HDDs and SSDs, the DS6200 supports up to 240 drives (using 9 expansion units) or 276 drives using (3) D3284 High Density Enclosures, as well as mixing LFF and SFF enclosures in the same array.

The Lenovo ThinkSystem DS6200 is designed for mission critical workloads running in the datacenter with performance and value in mind, and equipped with enterprise-class features, the DS6200 is designed to fit your needs now and into the future.
Priced Storage Configuration Components

1 x ThinkSystem 430-8E SAS HBA

1 x ThinkSystem DS6200, with:
- 2 x Storage Controllers
  - 16 GB cache (32 GB total)
  - 4 x 12 Gb SAS Front End Ports
  - 1 x 12 Gb SAS Back End Connection
- 12 x 400 GB SSD

CONFIGURATION INFORMATION

Benchmark Configuration and Tested Storage Configuration

The following diagram illustrates the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC) and the Host System(s).

**ThinkSystem SR630**
- 2x 6148 Intel Xeon Gold (2.40 GHz, 20-Core, 27.5 MB)
- 64 GB Memory
- Windows 2012 R2

**Lenovo ThinkSystem DS6200**
- 2x Controllers, each with:
  - 16 GB
  - 4x 12 Gb SAS Port (SFF-8644) (front end)
  - 1x 12 Gb SAS Port (SFF-8644) (back end)
- 12x 400 GB SSD

**ThinkSystem 430-8E SAS HBA**
**Two 12Gb SAS Cables**

**Tested Storage Configuration (TSC)**

The Benchmark Configuration utilized direct-attached storage.

Storage Network Configuration

The Benchmark Configuration utilized direct-attached storage.
Host System and Tested Storage Configuration Components

The following table lists the components of the Host System(s) and the Tested Storage Configuration (TSC).

<table>
<thead>
<tr>
<th>Host Systems</th>

Benchmark Configuration Creation Process

Customer Tuning Parameters and Options

All the customer tuning parameters and options that have been altered from their default values for this benchmark are included in Appendix C and in the Supporting Files (see Appendix A).

Tested Storage Configuration Creation

A detailed description of how the logical representation of the TSC was created is included in Appendix D and in the Supporting Files (see Appendix A).

Tested Storage Configuration Inventory

An inventory of the components in the TSC, as seen by the Benchmark Configuration, is included in Appendix E and in the Supporting Files (see Appendix A).

Workload Generator Storage Configuration

The SPC-1 Workload Generator storage configuration commands and parameters used to invoke the execution of the tests are included in Appendix F and in the Supporting Files (see Appendix A).

Logical Volume Capacity and ASU Mapping

The following table details the capacity of each ASU and how they are mapped to logical volumes (LV).

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**SPC-1 ASU Capacity** 2,267

*See [Space Optimization Techniques](#)

Physical Storage Capacity and Utilization

The following table details the Physical Capacity of the storage devices and the Physical Capacity Utilization (percentage of Total Physical Capacity used) in support of hosting the ASUs.

<table>
<thead>
<tr>
<th>Devices</th>
<th>Count</th>
<th>Physical Capacity</th>
<th>Total Capacity</th>

<td></td>
<td><strong>4,800</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Physical Capacity Utilization</strong></td>
<td></td>
<td><strong>47.23%</strong></td>
<td></td>
</tr>
</tbody>
</table>

Data Protection

The data protection level used for all logical volumes was Protected 1 (RAID-10), which was accomplished by configuring 2 pools of 6 drives into 2 RAID-10 arrays.
**BENCHMARK EXECUTION RESULTS**

This portion of the Full Disclosure Report documents the results of the various SPC-1 Tests, Test Phases, and Test Runs.

**Benchmark Execution Overview**

**Workload Generator Input Parameters**

The SPC-1 Workload Generator commands and input parameters for the Test Phases are presented in the Supporting Files (see Appendix A).

**Primary Metrics Test Phases**

The benchmark execution consists of the Primary Metrics Test Phases, including the Test Phases SUSTAIN, RAMPD_100 to RAMPD_10, RAMPU_50 to RAMPU_100, RAMP_0, REPEAT_1 and REPEAT_2.

Each Test Phase starts with a transition period followed by a Measurement Interval.

**Measurement Intervals by Test Phase Graph**

The following graph presents the average IOPS and the average Response Times measured over the Measurement Interval (MI) of each Test Phase.

---

**Exception and Waiver**

None.
SUSTAIN Test Phase

Space Optimization Techniques

Description of Utilized Techniques

The TSC did not utilize any space optimization techniques.

Physical Free Space Metrics

If space optimization techniques were utilized, the following table lists the Physical Free Space as measured at each of the required points during test execution.

<table>
<thead>
<tr>
<th>Physical Free Space Measurement</th>
<th>Free Space (GB)</th>
</tr>

Data Persistence Test

Data Persistence Test Results file

The results files generated during the execution of the Data Persistence Test is included in the Supporting Files (see Appendix A) as follows:

- SPC1_PERSIST_1_0_Raw_Results.xlsx
- SPC1_PERSIST_2_0_Raw_Results.xlsx

Data Persistence Test Execution

The Data Persistence Test was executed using the following sequence of steps:

- The PERSIST_1_0 Test Phase was executed to completion.
- The Benchmark Configuration was taken through an orderly shutdown process and powered off.
- The Benchmark Configuration was powered on and taken through an orderly startup process.
- The PERSIST_2_0 Test Phase was executed to completion.

Data Persistence Test Results

Committed Data Persistence Implementation

The DS6200 uses Supercapacitors and a local Compact Flash for cache protection. Each controller in the subsystem has a local Compact Flash which can be used to save and restore data in the case of an emergency shutdown during power loss. The supercapacitors are used to maintain power to the memory subsystem and processor to allow a fire hose dump of the data to the Compact Flash during an unexpected power loss.

</tbody>
</table>

Tuning was done use the CLI (see Appendix C)
**APPENDIX B: THIRD PARTY QUOTATION**

All components are directly available through the Test Sponsor.
APPENDIX C: TUNING PARAMETERS AND OPTIONS

The standard DS6200 Controller CLI was used to apply the necessary tuning parameters for the test.

1. You must first create a user account with the proper privileges to enable the tuning.
2. To do that, login with the manage user account and run the following command:
   ```
   create user roles diagnostic interfaces wbi,cli,ftp type diagnostic new_user
   ```
3. Once you have created the user you must login with that user account
4. Then run the following command:
   ```
   set advanced-settings random-io-performance-optimization enabled
   ```
5. Disable disk groups background scrub command:
   ```
   set advanced-settings background-scrub disabled
   ```

Note: Disk scrubbing is an important background maintenance task. Typical best-practice in production environments is to schedule it for regular intervals during non-peak hours. Disk scrubbing was disabled during this test as an “ease of benchmarking” practice to avoid scheduling issues. Disabling disk scrubbing in a production environment is not recommended.
APPENDIX D: STORAGE CONFIGURATION CREATION

Storage groups and volumes are created using the following script (DS6200_volume_map.bash):

1. ssh manage@10.240.43.243 "add disk-group disks 0.0,0.1:0.2,0.3:0.4,0.5 level raid10 pool a type virtual; add disk-group disks 0.6,0.7:0.8,0.9:0.10,0.11 level raid10 pool b type virtual; create volume pool a size 510GB ASU1-A large-virtual-extents enable; create volume pool a size 510GB ASU2-A large-virtual-extents enable; create volume pool a size 114GB ASU3-A large-virtual-extents enable; create volume pool b size 510GB ASU1-B large-virtual-extents enable; create volume pool b size 510GB ASU2-B large-virtual-extents enable; create volume pool b size 114GB ASU3-B large-virtual-extents enable; map volume lun 10 ports A0 ASU1-A; map volume lun 11 ports A0 ASU2-A; map volume lun 12 ports A0 ASU3-A; map volume lun 13 ports B0 ASU1-B; map volume lun 14 ports B0 ASU2-B; map volume lun 15 ports B0 ASU3-B; set pool a overcommit disable; set pool b overcommit disable"

2. The add disk group commands are used to create 2 pools with a single disk group per pool
   add disk-group disks 0.0,0.1:0.2,0.3:0.4,0.5 level raid10 pool a type virtual
   add disk-group disks 0.6,0.7:0.8,0.9:0.10,0.11 level raid10 pool b type virtual

3. Each Disk group is configured with (6) 400GB SSDs in a RAID 10 layout

4. The create volume commands are used to assign (3) volumes to each of the disk groups configured in step 1 with the large virtual extents enabled to aid in the page allocation
   create volume pool a size 510GB ASU1-A large-virtual-extents enable
   create volume pool a size 510GB ASU2-A large-virtual-extents enable
   create volume pool a size 114GB ASU3-A large-virtual-extents enable
   create volume pool b size 510GB ASU1-B large-virtual-extents enable
   create volume pool b size 510GB ASU2-B large-virtual-extents enable
   create volume pool b size 114GB ASU3-B large-virtual-extents enable

5. The volumes are then mapped to either the A0 or B0 SAS port in the final 6 commands.
   map volume lun 10 ports A0 ASU1-A
   map volume lun 11 ports A0 ASU2-A
   map volume lun 12 ports A0 ASU3-A
   map volume lun 13 ports B0 ASU1-B
map volume lun 14 ports B0 ASU2-B
map volume lun 15 ports B0 ASU3-B

6. The last step is to disable the pool overcommit so that all pages are allocated into the proper pool.

The Host will see the Disks after mapping. Make the disks online and initialized.

Next, use Windows Disk Management to create the striped ASU volumes.

<table>
<thead>
<tr>
<th>“Physical Disk”</th>
<th>LUN #</th>
<th>ASU</th>
<th>Drive Letter</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 and 4</td>
<td>10 and 13</td>
<td>ASU-1</td>
<td>I:</td>
</tr>
<tr>
<td>2 and 5</td>
<td>11 and 14</td>
<td>ASU-2</td>
<td>J:</td>
</tr>
<tr>
<td>3 and 6</td>
<td>12 and 15</td>
<td>ASU-3</td>
<td>K:</td>
</tr>
</tbody>
</table>

1. Start Disk Management
2. Right click on Disk 1, and select **New Striped Volume...**

3. Wizard pops up. Select **Next**
4. On **New Striped Volume** window, highlight **Disk 4** and click on **Add >**
5. **Disk 1** and **Disk 4** in the selected area, click **Next**

6. Click **Assign the following drive letter**, select **I**, then **Next**
7. On **Format Volume** window, select **Do not format this volume**, then **Next**

8. **Completing the New Striped Volume Wizard**, click **Finish**
9. **Disk Management** confirmation, click *Yes*

10. **Microsoft Windows** asking to format disk, click *Cancel*

11. Repeat steps 2 – 10 for drives J: and K:

12. After all three logical volumes have been created, Disk Management will look as this:

Submitted for Review: May 17, 2018
APPENDIX E: CONFIGURATION INVENTORY

The Test Storage Configuration was collected before and after the test phases. The CLI commands were used.

# show system
# show controllers
# show versions detail
# show ports
# show disks encl
# show volumes detail
# show disk-groups

The outputs of the commands were in the log files:

/0505_Before  Before the test
/0505_After    After the test
APPENDIX F: WORKLOAD GENERATOR

The ASU Definition file is included in the Supporting Files.

SPC1.asu
OFFSET=0
SIZE=0
ASU=1
DEVICE=\\\i:
ASU=2
DEVICE=\\\j:
ASU=3
DEVICE=\\\k:

The full-run of the test used the script basic_full_run_S6200_0505.bat and manually invoke the PERSIST_2 after the TSC was restarted.

basic_full_run_S6200_0505.bat
set IOPS=180000
set INIT_IOPS=1000
set PERSIST_IOPS=45000
set OUTPUT=full_run_output_S6200_0505
set STORAGE=SPC1.asu
set SPC1=spc1_v3.0.2
#
%SPC1% -run SPC1_INIT -output %OUTPUT% -iops %INIT_IOPS% -storage %STORAGE%
%SPC1% -run SPC1_VERIFY -output %OUTPUT% -iops 100 -storage %STORAGE%
%SPC1% -run SPC1_METRICS -output %OUTPUT% -iops %IOPS% -storage %STORAGE%
%SPC1% -run SPC1_VERIFY -output %OUTPUT% -iops 100 -storage %STORAGE%
%SPC1% -run SPC1_PERSIST_1 -output %OUTPUT% -iops %PERSIST_IOPS% -storage %STORAGE%

echo "Now Restart the TSC and run:"
echo "S6200run > .\SPC1_v3.0.2 -run SPC1_PERSIST_2 -output full_run_output_S6200_0505 -iops 45000 -storage SPC1.asu"
echo "with any other options you used in this run"
Manually invoke PERSIST_2:

`.\SPC1_v3.0.2 -run SPC1_PERSIST_2 -output full_run_output_S6200_0505 -iops 45000 -storage SPC1.asu`
