Audit Certification

Zhong Xu
Huawei Technologies Co., Ltd.
Huawei Industrial Base, Bantian,
Longgang, Shenzhen city,
Guangdong province, China

June 2, 2017

I verified the SPC Benchmark 1™ (SPC-1™ Revision 3.4.0) test execution and performance results of the following Tested Storage Product:

**Huawei OceanStor™ Dorado6000 V3**

The results were:

<table>
<thead>
<tr>
<th>SPC-1 IOPS™</th>
<th>1,000,580</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPC-1 Price-Performance™</td>
<td>$0.46/SPC-1 IOPS™</td>
</tr>
<tr>
<td>SPC-1 IOPS™ Response Time</td>
<td>0.472 ms</td>
</tr>
<tr>
<td>SPC-1 Overall Response Time</td>
<td>0.380 ms</td>
</tr>
<tr>
<td>SPC-1 ASU Capacity</td>
<td>36,078 GB</td>
</tr>
<tr>
<td>SPC-1 ASU Price</td>
<td>$12.59/GB</td>
</tr>
<tr>
<td>SPC-1 Total System Price</td>
<td>$453,882.94</td>
</tr>
</tbody>
</table>

In my opinion, these performance results were produced in compliance with the SPC requirements for the benchmark.

The testing was executed using the SPC-1 Toolkit Version 3.0 Build d34f83c. The audit process was conducted in accordance with the SPC Policies and met the requirements for the benchmark.

A Letter of Good Faith was issued by the Test Sponsor, stating the accuracy and completeness of the documentation and testing data provided in support of the audit of this result.

A Full Disclosure Report for this result was prepared by Infosizing, reviewed and approved by the Test Sponsor, and can be found at [www.storageperformance.org](http://www.storageperformance.org) under the Submission Identifier A31006.
The independent audit process conducted by Infosizing included the verifications of the following items:

- The physical capacity of the data repository;
- The total capacity of the Application Storage Unit (ASU);
- The accuracy of the Benchmark Configuration diagram;
- The tuning parameters used to configure the Benchmark Configuration;
- The Workload Generator commands used to execute the testing;
- The validity and integrity of the test result files;
- The compliance of the results from each performance test;
- The compliance of the results from the persistence test;
- The compliance of the submitted pricing model; and
- The differences between the tested and the priced configuration, if any.

The Full Disclosure Report for this result was prepared in accordance with the disclosure requirements set forth in the specification for the benchmark.

The following benchmark requirements, if any, were waived according to the SPC Policies:

- None.

Respectfully Yours,

[Signature]

François Reab, Certified SPC Auditor
LETTER OF GOOD FAITH

Date: June 1, 2017

From: Huawei Technologies Co., Ltd.

To: Mr. Francois Raab, Certified SPC Auditor
    InfoSizing, Inc.
    20 Kreg Lane
    Manitou Springs, CO 80829

Subject: SPC-1 Letter of Good Faith for the Huawei OceanStor Dorado 6000 V3

Huawei Technologies Co., Ltd. is the SPC-1 Test Sponsor for the above listed product. To the best of our knowledge and belief, the required SPC-1 benchmark results and materials we have submitted for that product are complete, accurate, and in full compliance with V3.4 of the SPC-1 benchmark specification.

In addition, we have reported any items in the Benchmark Configuration and execution of the benchmark that affected the reported results even if the items are not explicitly required to be disclosed by the SPC-1 benchmark specification.

Signed:...

Date: 6/1/2017

  - 2 x 16-port PCIe switches
  - 4 x 2U disk enclosures
  - 100 x 900 GB SSDs

Tested Storage Configuration (TSC)
Tested Storage Product Description

Purpose built for mission-critical services, the OceanStor Dorado V3 all-flash storage system provides high-performance, high-reliability, and high-efficiency storage services. The HyperMetro gateway-free active-active design delivers 99.9999% availability. Inline de-duplication and compression technologies reduce the initial purchase cost.

The offering meets the storage requirements of databases, virtual desktops, and virtual servers, smoothing the way for customers in finance, manufacturing, government, telecom, and other sectors in the all flash era.

Huawei Technologies Co., Ltd.

OceanStor™ Dorado6000 V3
Third-Party Reseller: Huawei Technologies Co., Ltd. only sells its products to third-party resellers who, in turn, sell those products to U.S. customers. The above reflects the pricing quoted by one of those third-party resellers. See Appendix B of the Full Disclosure Report for a copy of the third-party reseller’s quotation.

Discount Details: The discounts shown are based on the storage capacity purchased and are generally available.

Warranty: Hi-Care Premier On-Site Service include: 7x24 Technical Assistance Center Access. Access to all new software updates and Online Support. 24x7 with 4-hour On-site Hardware Replacement.

Availability Date: Currently available.

**CONFIGURATION INFORMATION**

Benchmark Configuration and Tested Storage Configuration

The following diagram illustrates the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC) and the Host Systems.
Storage Network Configuration

The Tested Storage Configuration (TSC) involved an external storage subsystem made of 4 Huawei OceanStor Dorado6000 V3 Storage Controllers, driven by 8 host systems (Huawei FusionServer RH5885H V3). Each FusionServer connected one-to-one to each Dorado controller. That connection was established via two ports from each of the four dual-port Fibre Channel HBAs on each FusionServer; and two ports from one of the four 4-port Smart I/O Modules on each Dorado controller. These Fibre Channel paths operated at 8Gbps. The four Dorado controllers were interconnected using two 16-port PCIe 3.0 switches. Each of the 32 PCIe connections used 8 lanes operating at 8Gbps.

Host System and Tested Storage Configuration Components

The following table lists the components of the Host System(s) and the Tested Storage Configuration (TSC).

Benchmark Configuration Creation Process

Customer Tuning Parameters and Options

All the customer tuning parameters and options that have been altered from their default values for this benchmark are included in Appendix C and in the Supporting Files (see Appendix A).

Tested Storage Configuration Creation

A detailed description of how the logical representation of the TSC was created is included in Appendix D and in the Supporting Files (see Appendix A).

Tested Storage Configuration Inventory

An inventory of the components in the TSC, as seen by the Benchmark Configuration, is included in Appendix E and in the Supporting Files (see Appendix A).

Workload Generator Storage Configuration

The SPC-1 Workload Generator storage configuration commands and parameters used to invoke the execution of the tests are included in Appendix F and in the Supporting Files (see Appendix A).

Logical Volume Capacity and ASU Mapping

The following table details the capacity of each ASU and how they are mapped to logical volumes (LV).

<table>
<thead>
<tr>
<th>LV per ASU</th>
<th>LV Capacity</th>
<th>Used per LV</th>
<th>Total per ASU</th>
<th>% ASU Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASU-1</td>
<td>18</td>
<td>902.0</td>

</tr>
<tr>
<td>ASU-3</td>
<td>2</td>
<td>1,803.9</td>
<td>1,803.9</td>
<td>3,607.8</td>
</tr>
</tbody>
</table>

SPC-1 ASU Capacity 36,077.7

Physical Storage Capacity and Utilization

The following table details the Physical Capacity of the storage devices and the Physical Capacity Utilization (percentage of Total Physical Capacity used) in support of hosting the ASUs.

<table>
<thead>
<tr>
<th>Devices</th>
<th>Count</th>
<th>Physical Capacity</th>
<th>Total Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>900GB SSD</td>
<td>100</td>
<td>894.0</td>
<td>89,402.5</td>
</tr>
</tbody>
</table>

Total Physical Capacity 89,402.5

Physical Capacity Utilization 40.35%
Data Protection

The data protection level used for all logical volumes was **Protected 2**, which was accomplished by configuring all 100 drives into a single RAID-5 pool, and by having redundant paths to the logical volumes through redundant components.
BENCHMARK EXECUTION RESULTS

This portion of the Full Disclosure Report documents the results of the various SPC-1 Tests, Test Phases, and Test Runs.

Benchmark Execution Overview

Workload Generator Input Parameters

The SPC-1 Workload Generator commands and input parameters for the Test Phases are presented in the Supporting Files (see Appendix A).

Primary Metrics Test Phases

The benchmark execution consists of the Primary Metrics Test Phases, including the Test Phases SUSTAIN, RAMPD_100 to RAMPD_10, RAMPU_50 to RAMPU_100, RAMP_0, REPEAT_1 and REPEAT_2.

Each Test Phase starts with a transition period followed by a Measurement Interval.

Measurement Intervals by Test Phase Graph

The following graph presents the average IOPS and the average Response Times measured over the Measurement Interval (MI) of each Test Phase.

![Measurement Intervals by Test Phase Graph](image-url)
**Exception and Waiver**

During the course of the benchmark audit, no exceptions were encountered and no benchmark requirements were waived.
SUSTAIN Test Phase

SUSTAIN – Results File

The results file generated during the execution of the SUSTAIN Test Phase is included in the Supporting Files (see Appendix A) as follows:

- **SPC1_METRICS_0_Raw_Results.xlsx**

Response Time Ramp Test

Response Time Ramp Test – Results File
The results file generated during the execution of the Response Time Ramp Test is included in the Supporting Files (see Appendix A) as follows:

- SPC1_METRICS_0_Raw_Results.xlsx

Response Time Ramp Test – Phases
The Response Time Ramp Test is comprised of 11 Test Phases, including six Ramp-Down Phases (executed at 100%, 95%, 90%, 80%, 50%, and 10% of the Business Scaling Unit) and five Ramp-Up Phases (executed at 50%, 80%, 90%, 95%, and 100% of the Business Scaling Unit).

Data Persistence Test

**Data Persistence Test Result files**

The results files generated during the execution of the Data Persistence Test is included in the Supporting Files (see Appendix A) as follows:

- SPC1_PERSIST_1_0_Raw_Results.xlsx
- SPC1_PERSIST_2_0_Raw_Results.xlsx

**Data Persistence Test Execution**

The Data Persistence Test was executed using the following sequence of steps:

- The PERSIST_1_0 Test Phase was executed to completion.
- The Benchmark Configuration was taken through an orderly shutdown process and powered off.
- The Benchmark Configuration was powered on and taken through an orderly startup process.
- The PERSIST_2_0 Test Phase was executed to completion.

</tr>
</tbody>
</table>

**Committed Data Persistence Implementation**

The persistency of committed data is implemented at two levels. At the disk level, data loss is prevented through the use of RAID5 arrays. At the controller level, all caches are mirrored across controllers, where write requests are only completed once the local cache has been successfully mirrored in another controller’s cache. In addition, cache content is protected from a loss of power by flushing the cache content to permanent flash memory, as soon as a power loss is detected. The flushing action is powered by a battery backup located in each controller.

**Payment Terms:**

Comments:

Noviant is an Authorized Value Added reseller (VAR) of networking products. Products sold by NF are factory new unless otherwise specified. All new products sold by NF carry its own Original Equipment Manufacturers (OEM) Limited Warranty and software licenses. This Quote is valid for 90 days. Prices and availability are subject to change without notice. Installation and configuration costs are not included in the quoted pricing unless specified. A 20% Restocking Fee applies to all cancelled orders and/or returned products. 

**Authorized Acceptance:**

Print Name: Kevin Wang

Date: 6/1/17
APPENDIX C: TUNING PARAMETERS AND OPTIONS

The following scripts, listed below, were used to set tuning parameters and options:

- `aio-max-nr.sh` to set the maximum asynchronous I/O
- `nr_requests.sh` to change the I/O scheduler
- `scheduler.sh` to increase the disk queue depth

The scripts described above are included in the Supporting Files (see Appendix A) and listed below.

```
```
aio-max-nr.sh
```
echo 1048576 > /proc/sys/fs/aio-max-nr
```
```
nr_requests.sh
```
echo 1024 > /sys/block/sdb/queue/nr_requests
echo 1024 > /sys/block/sdc/queue/nr_requests
echo 1024 > /sys/block/sdd/queue/nr_requests
echo 1024 > /sys/block/sde/queue/nr_requests
echo 1024 > /sys/block/sdf/queue/nr_requests
echo 1024 > /sys/block/sdg/queue/nr_requests
echo 1024 > /sys/block/sdh/queue/nr_requests

```
```
APPENDIX D: STORAGE CONFIGURATION CREATION

Environment

First, the CLI commands from the following command file are copied and pasted into the Dorado6000 V3 CLI window. These commands are executed on one of the Host Systems.

- `mklun.txt`

Next, the following shell script is executed on one of the Host Systems.

- `mkvolume.sh`

The command files described above are included in the Supporting Files (see Appendix A) and listed below.

Following are the detailed steps involved in creating the storage configuration:

**Step 1 - Create Disk Domains, Storage Pools, LUNs**

The `mklun.txt` command file, listed below, includes all the CLI commands to perform the following actions:

- Create 1 disk domain
- Create 1 storage pool
- Create 16 LUNs
- Create one LUN group
- Add the 16 LUNs to the LUN group

**Step 2 - Create Mapping View, Host Group and Host**

The `mklun.txt` command file, listed below, includes all the CLI commands to perform the following actions:

- Create 1 mapping view
- Create 1 host group
- Create 8 hosts
- Add the 8 hosts to the host group
- Add the host group and the LUN group to the mapping view
- Add the Fibre Channel ports to the hosts

**Step 3 - Create Volumes on the Master Host System**

The `mkvolume.sh` script, listed below, is executed on the Master Host System to perform the following actions:

- Create 16 physical volumes
- Create 1 volume group
- Create 38 logical volumes (18 for ASU-1, 18 for ASU-2 and 2 for ASU-3)

APPENDIX E: CONFIGURATION INVENTORY

An inventory of the Tested Storage Configuration was collected before and after the test execution. The test execution script invokes *shstorage.tcl* to collect the inventory profile of the storage configuration. The following log file are generated and are included in the Supporting Files (see Appendix A):

- **profile1_volume.log** List of configured volumes before the INIT Phase.
- **profile1_storage.log** List of configured storage before the INIT Phase.
- **Profile2_volume.log** List of configured volumes after TSC restart.
- **Profile2_storage.log** List of configured storage after TSC restart.

The above script is included in the Supporting Files (see Appendix A) and listed below.

```sh
#!/usr/bin/tclsh

package require Expect
set stor 8.46.177.124
set stor_user admin
set stor_pswd Admin@storage4

proc cmd {str} {
    append str "\r"
    send "\r"
    expect ">
    send $str
    expect {
        -re "More" {
            send " ";
            exp_continue
        }
        -re ">" {
            send "\r"
        }
    }
    set expect_out(buffer) " "
}

spawn ssh $stor_user@$stor
set timeout 60
expect {
    "assword" {
        send "$stor_pswd\r"
    }

The host parameters for the SPC-1 workload generator were defined using the script `8host.HST`.

The ASUs accessed by the SPC-1 workload generator are defined using the script `slave_asu.asu`.

The phases of the benchmark are executed using the script `full_run.sh`. The script pauses at the end of the PERSIST_1 test phase. Once the TSC has been restarted, the PERSIST_2 test phase is executed by pressing ENTER from the console where the script has been invoked.

The above script is included in the Supporting Files (see Appendix A) and listed below.
