CONFIGURATION INFORMATION

Benchmark Configuration and Tested Storage Configuration

The following diagram illustrates the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC) and the Host System(s).

Storage Network Configuration

The Tested Storage Configuration (TSC) involved an external storage subsystem made of 16 Huawei OceanStor 18500, driven by 13 host systems (Huawei FusionServer RH5885 V3). Each FusionServer connected one-to-one to each OceanStor. That connection was established via a port from one of the eight dual-port Fibre Chanel HBAs on the FusionServer; and a port from one of the four 4-port Smart I/O Modules on the OceanStor, leaving 3 of these ports inactive. These Fibre Chanel paths operated at 8Gbps.

Host System and Tested Storage Configuration Components

The following table lists the components of the Host System(s) and the Tested Storage Configuration (TSC).

Host Systems
13 x Huawei FusionServer™ RH5885 V3 4 x Intel Xeon E7-4820 V2 (2.0 GHz 8 Core 16 MB L3) 256 GB Main Memory Red Hat Enterprise Linux 7.1
Priced Storage Configuration
104 x QLogic dual-ported QLE2562 FC HBA
16 x OceanStor™ 18500 V3 Active-Active Controller, each with: 256 GB cache (4096 GB total) 4 x 4-port 8Gbps Smart I/O Module 8 x 12-port 12Gbps SAS I/O Module 16 x 2U disk enclosure, each with: 15 x 900 GB SSD (240 total) 2 x PCIe 16 port switch 1 x Service Processor 1 x 8-port KVM

Differences Between Tested and Priced Storage Configurations

There were no differences between the Tested Storage Configuration and the Priced Storage Configuration.

The following table details the capacity of each ASU and how they are mapped to logical volumes (LV).

	LV per ASU	LV Capacity	Used per LV	Total per ASU	% ASU Capacity
ASU-1	18	1,910.2	1,910.2	34,383.4	45.00%
ASU-2	18	1,910.2	1,910.2	34,383.4	45.00%
ASU-3	2	3,820.4	3,820.4	7,640.7	10.00%
SPC-1 ASU Capacity			76,407.5		

Physical Storage Capacity and Utilization

The following table details the Physical Capacity of the storage devices and the Physical Capacity Utilization (percentage of Total Physical Capacity used) in support of hosting the ASUs.

Devices	Count	Physical Capacity	Total Capacity
900GB SSD	240	895.0	214,800.0
Total Physical Capacity			214,800.0
Physical Capacity Utilization			35.57%

Data Protection

The data protection level used for all logical volumes was **Protected 2**, which was accomplished by configuring 16 pools of 15 drives into 16 RAID-10 arrays.

Step 3 - Create Volumes on the Host Systems

The ***mkvolume.sh*** shell script, listed below, is invoked on one of the Host Systems to perform the following actions:

- Create 32 physical volumes
- Create a volume group for the 32 physical volumes
- Create 18 Logical Volumes for ASU-1
- Create 18 Logical Volumes for ASU-2
- Create 2 Logical Volumes for ASU-3

The shell script described above is included in the Supporting Files (see Appendix A) and listed below.

APPENDIX E: CONFIGURATION INVENTORY

An inventory of the Tested Storage Configuration was collected during the execution the script *full_run.sh*. It generated the following log file:

- ***profile1_volume.log*** List of configured volumes before the INIT Phase.
- ***profile1_storage.log*** List of configured storage before the INIT Phase.
- ***Profile2_volume.log*** List of configured volumes after TSC restart.
- ***Profile2_storage.log*** List of configured storage after TSC restart.

The above log files are included in the Supporting Files (see Appendix A).

APPENDIX F: WORKLOAD GENERATOR

The ASUs accessed by the SPC-1 workload generator, are defined using the script ***slave_asu.asu***.

The phases of the benchmark are executed using the script ***full_run.sh***. The script pauses at the end of the PERSIST_1 test phase. Once the TSC has been restarted, the PERSIST_2 test phase is executed by pressing ENTER from the console where the script has been invoked.

The above scripts are included in the Supporting Files (see Appendix A) and listed below.
